

# Aqua-Hort®

## Bisceglia in Puglia, Italy use Aqua-Hort

The Bisceglia Group has used Aqua-Hort for several years. It started out with a boat model in the outdoor reservoir of one of the nurseries. The main purpose was to solve the algae problems in the irrigation system, secondarily to improve the plants. A tank model was later installed in another Bisceglia nursery. A variety of pot plants are produced. The major crops are Cyclamen, Dipladenia and pot roses as the biggest. The rose varieties are Roses Forever. ([www.roses-forever.com](http://www.roses-forever.com))

The picture shows Michele Bisceglia in front of his Aqua-Hort tank model installation. The Italian Aqua-Hort agent Franz Veit (Florian Veit and Florian Thaler) has made the sale and supervised the installation.

The outcome of the Aqua-Hort installation was good from the start. The algae problems of the reservoir was solved. On the crop side Mr. Bisceglia mentions three big advantages: Disease control. First class cyclamen, very compact and no Fusarium problems, and superb root building in the Dipladenia crop.
