

## Aqua-Hort® and Rhododendron

### Grinderslev.dk Rhododendron grow with Aqua-Hort

#### **John Grinderslev Makes the following statement about the use of Aqua-Hort:**

We have produced Rhododendron and other low pH plants in great numbers for more than 15 years. We grow a great variety of sorts. It is wellknown that it is nearly impossible to keep the plants free for fungus diseases. These may cause great economic losses, especially since the increased controls for *Phytophthora ramorum*.

We have used Aqua-Hort for several years, **with so good result that we no more use fungicides at all**. All the water supplied is treated in the Aqua-Hort, and gives effective protection against attacks and spreading of *Phytophthora* and other root diseases.

The positive results can be observed on all our watering systems: drip irrigation, nozzle watering and sprinklers. Everywhere we see good effect, the number of fungus infected plants is down to few promilles, while it could be counted in several percentages before the Aqua-Hort was installed.

We can therefore warmly recommend the system. Particularly in the light of the more rigorous rules for the use of chemicals and the rising labour costs for applying those chemicals.
