

Aqua-Hort®

Gärtnerei Holtkamp in Rees, Germany use Aqua-Hort

The Holtkamp nurseries are known as leading breeders and propagators of Saintpaulia world wide. The location in Rees is still the headquarter for the operations, but the bulk of the young plant production takes place in Zimbabwe.

Saintpaulia is a crop which suffers easily from Phytophthora and Pythium attacks. The Holtkamp nurseries has for more than 10 years used Aqua-Hort in Germany and Zimbabwe to prevent and cure these diseases.

Thomas Holtkamp is the overall production manager of Holtkamp. He says: **Aqua-Hort is the most vital crop disease instrument we have. We are dependent on it for maintaining the health of our plants. We have tried several other methods, including chlor product machines. None of these has been able to deliver the good effects which Aqua-Hort can deliver. Aqua-Hort works systemically in the root zone over time, is harmless for the plants, and promotes root growth. It is very easy to handle, and cheap to use.**

Thomas Holtkamp is available for questions about their use of Aqua-Hort. Tel: +49 2857 2991. Email: thomaseholtkamp@aol.com
