

Ottenwaelder Frères in Frejus use Aqua-Hort

Three years ago, in 2009, the Ottenwaelder Frères in Frejus near Nice installed three Aqua-Hort machines in their 2 hectare pot plant nursery.

Ottenwaelder Frères produce: Gerbera, Hibiscus, Cyclamen and pelargonium. Their products are sold directly to flower shops and outlets in the Southeastern area of France.

Ebb-flood benches are installed in a small portion of the nursery. In the major part are the crops grown on flood floors.

The benefits gained from using Aqua-Hort are big. Phytophthora was before a major issue, especially in Cyclamen and Gerbera, causing crop losses and expenses for fungicides. After the installation has no more fungicides been applied, and the crop losses are practically nil.

Jean Marie Ottenwaelder is available for further questions about the use of Aqua-Hort in the nursery. Please call: +33 674 7859 93, email: ottenwaelder-freres@wanadoo.fr
