

## Peter Schjøtt Planteskole, Denmark use Aqua-Hort

In 2008 Peter Schjøtt's Planteskole, [www.planteskole.dk](http://www.planteskole.dk), installed Aqua-Hort in an unheated greenhouse used for production of *Abies nordmanniana*. A conifer used primarily as Christmas tree. Peter Schjøtt sell them as young plants to farmers and forest owners who cultivate them for 5-7 years.

Aqua-Hort was installed to prevent and cure the fungus diseases which hampered the crop quite frequently, among those Phytophthora.

**The outcome has been a steadily decline in the use of fungicides over the years. This in spite of increased attacks in other areas of the nursery where Aqua-Hort is not in use. The machine has been used in combination with different types of fertilizers, predators and herbicides without negative consequences.**

Pia Schjøtt is responsible for the production activities. She is available on +45 29669925 or email: [pia@planteskole.dk](mailto:pia@planteskole.dk) for questions about the use of Aqua-Hort.
