

Rønbæk A/S use Aqua-Hort

Christian Schwartz, Rønbæk A/S in front of the office

Background

Rønbæk A/S Hinnerup Denmark by Erik Schwartz and his two sons Søren and Christian is one of the pioneer nurseries since 1998, in production of pot orchids. Earlier they produced green leaf pot plants. They are known for production of high quality orchids. The production area is today 2 hectares.

In 2004 Rønbæk became the first orchid nursery to use Aqua-Hort. There was at times a problem with leave bacteriosis with its brown spots on the leaves. For this reason was Aqua-hort introduced. In the start was the dosing the “usual” 1,5 ppm Cu for pot plants. Some effect was seen, but the problem remained somehow. Then the dose was increased. This made the brown spots to disappear. The problem was solved. Today they apply 4,0 ppm
Two Aqua-Hort machines are installed, one for each fertilizer mixer.

Outcome

Since seven years has Aqua-Hort helped to maintain the super quality production coming from Rønbæk A/S. Disease problems are nearly non-existing.
